

WHEN MOVING COWS, BE PALS!

Be **P**atient

Consider the **A**ngle of your approach

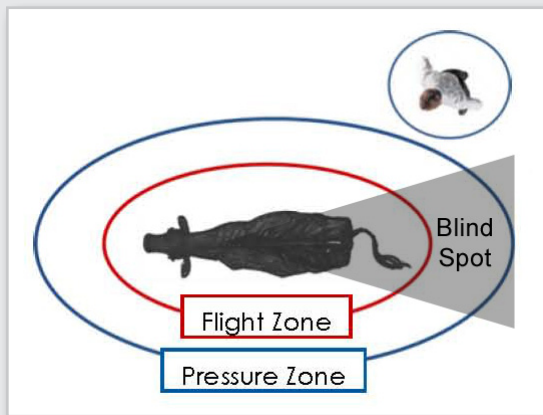

Think about your **L**ocation relative to the cow

Slow the **S**peed of your movements

HAVE PATIENCE! THE COW IS ALWAYS RIGHT.

Cows move consistently and predictably.

If a cow is not moving the way you'd like her to, reassess the signals you are giving her.

- Start cow movement by slowly approaching the cow's **pressure zone**
- Give a cow time and space to react to you
- Walk at a speed that keeps you out of the cow's **flight zone**
- The angle at which you approach a cow will influence the direction she moves.

The Upper Midwest Agricultural Safety and Health Center (UMASH) is funded by a cooperative agreement from the National Institute of Occupational Safety and Health (NIOSH).
