

Rural Firefighters Delivering Agricultural Safety and Health

Previous research found farmers **TRUST** firefighters and EMS.
Become a trainer today.
 See contact information below.

Agriculture has the **highest rate of injury** for any occupation

RFDASH trains first responders in three curriculums:

1. Farm MAPPER

Protects first responders by mapping farm hazards, like a pre-plan

167 workers per day are injured on farms

2. Farm HAT

Hazard analysis tool to **identify hazards** and offer farmers remediation

Too few safety consultants exist to help make farms safer

3. Farm First Aid

Classic **first aid course** with farm examples and how the accident could be prevented in the first place

How will we know it works?

Social Network Analysis has nothing to do with Facebook. It looks at the way people are connected and exchange information. It helps answer: is the curriculum helping to connect firefighters to each other, safety professionals, and farmers? What makes a trainer good at teaching the curriculum?
