Spotlight: Stress & Mental Health

When extreme stress manifests as a breaking point, like suicide, agricultural communities face unimaginable tragedy and loss. Stress, depression, and suicide are on the mind of agricultural communities, where economic, social, and environmental forces challenge the health and safety of farmers, agricultural workers and their families. As a result of panels, conversations, press coverage, legislative attention and more, it's clear that farmers, agricultural workers, and their families have been going through extremely stressful times, often with little opportunity to access help.

The Upper Midwest Agricultural Safety and Health Center (UMASH) identified the need to engage, understand, and prepare rural communities for this evolving problem as a critical issue for the UMASH Emerging Issues Program. In partnership with the Minnesota Department of Agriculture, UMASH convened a forum in June of 2018: Building Resilient Agricultural Communities. The forum was designed to facilitate a conversation to understand and address the challenges of ensuring appropriate community and rural health resources for mental health, and to stimulate the formation of partnerships to address this complex problem.

SUMMARY OF EVENT:

The forum included a Keynote address from Meg Moynihan, a dairy farmer and employee of the Minnesota Department of Agriculture who has firsthand experience with how forces completely beyond the control of an individual farmer can bring extreme stress.

A panel discussion followed with Doris Mold (farmer, MN Agri-women), Cynthie Christensen (RN and counselor), Gene Hugoson (farmer and former Commissioner of Agriculture), Paul Force-Emery Mackie (Mankato State and Past President of the National Association of Rural Mental Health), and Gloria Contreras (former agricultural worker and current board president of the Manos Latinas coop). They provided insight into some of the nuances and complexity of the problem to open and stimulate conversation. The forum participants learned about the different forces and circumstances that bring stress to farmers, agricultural workers and their families.

The afternoon was dedicated to workgroup discussions focused on identifying gaps and challenges of rural and community health in our region, followed by a brainstorming and crowdsourcing session to discuss ideas for addressing these challenges.

The forum embodied One Health in action, bringing together diverse stakeholders to build partnerships to address mental health in agricultural communities.

SPOTLIGHT: Farm Safety Partner Campaign is a Success!

Alone we can do so little; together we can do so much.
– Helen Keller

Helen Keller’s words sum up the power of partnerships in everyday language. Developing partnerships is key to the mission of UMASH. This September, UMASH launched the Farm Safety Partner Campaign to encourage others who care about agricultural health and safety to share farm safety resources and promote safe work practices throughout the month.

It was an exciting time to see the broad range of organizations and groups who stepped up and shared safety and health messages. Those who participated in the campaign represented 13 states and included extension, professional farm organizations, agribusiness, agricultural media, health care, commodity groups, state department of agriculture, and others.

When promoting farm safety and health there is never a shortage of topics. Our partners used this time to stress the importance of mental health/wellness/opioids, roadway safety, Roll Over Protection Structures, youth safety, and confined spaces.

The Farm Safety Partner campaign coincided with National Farm Safety and Health Week – an annual event dedicated to safety and health in agriculture. All eleven National Agriculture Safety and Health Centers participate in this week long event to encourage farmers, farm families and workers across the United States to practice safety all year.

⇒ Visit the Farm Safety Partners page to see a list of the organizations who participated.

Partner organizations delivered safety messages in a number of ways to best reach the agricultural community including:

- In person – at events
- News articles
- Newsletters
- Websites and blogs
- Social media
- Shared the flyer
- Radio interviews

We are looking for stories to bring farm safety to the forefront.

Do you have a personal farm safety story to share? Does your organization develop or deliver agricultural safety and health training workshops, resources, or related programming?

Send story ideas to: umash@umn.edu

The UMASH Ag Health and Safety Spotlight focuses on emerging issues in agricultural safety and health, and highlights “stories from the field” - examples from farm workers, families, and UMASH researchers.

More farmers, media and teachers ‘Telling the Story’

“Telling the Story Project” is helping those who have been impacted by agricultural trauma to speak a common language built on personal stories and injury prevention messaging. This simple strategy has led to widespread sharing of content since the project was formally introduced in June 2018.

Telling the Story Project has been featured in U.S. News and World Report, Brownfield Ag News, RFD-TV, Farm Journal’s Pork, This Week in Agribusiness, Nebraska PBS and NPR, Iowa Farmer Today, the Sunday editorial page of the Omaha World Herald, and many other media outlets.

The project will be the subject of a two-hour plenary panel on Thursday, Nov. 29, at the Midwest Rural Agricultural Safety and Health Conference (MRASH) in Council Bluffs, Iowa. “How to Make Positive Changes When Lives Change,” will include UMASH Outreach members Scott Heiberger and Melissa Ploeckelman of the National Farm Medicine Center. Heiberger and Ploeckelman recently attended the National FFA Convention in Indianapolis where they spoke with 50 FFA advisors, many of whom expressed enthusiasm for using Telling the Story Project content in classroom discussion guides as a way of teaching safety.

Telling the Story Project content is meant to be shared.

Farmers, media, teachers, Extension, and safety professionals are especially encouraged to link to the stories and repurpose content. Terms of use are at www.tellingthestoryproject.org/use-our-stories.

⇒ Learn more at: www.tellingthestoryproject.org

The project is made possible by through funding from the National Institute for Occupational Safety and Health (NIOSH) Agriculture, Forestry and Fishing Program. Participating regional centers include Central States Center for Agricultural Safety and Health (Nebraska); Great Plains Center for Agricultural Health (Iowa); and Upper Midwest Agricultural Safety and Health Center (Minnesota).

MMPA and UMASH Partnership

How Safe is Your Dairy Farm?

A recent webinar hosted by MMPA and presented by UMASH engaged dairy farmers to think about safety in their dairy operation. “How Safe is your Dairy Farm” was held September 25.

Jeff Bender presented on the various injuries that can occur on dairy farms and the enormous cost that is incurred. He also discussed the importance of positive animal handling when moving cows.

Amy Liebman gave an overview of the Seguridad en las lecherías immigrant dairy worker health program, which has now expanded to Minnesota using the same format. Promoting Safety and Worker Health for Immigrant Dairy Workers consists of FREE trainings in Spanish to dairy workers on health and safety issues, as well as components to engage veterinarians and help producers reinforce safety messages and make their farms safer.

FUNDING OPPORTUNITIES

Midwest Center for Occupational Health and Safety (MCOHS)

APPLICATION DEADLINE: November 30

The Midwest Center for Occupational Health and Safety (MCOHS) is now accepting applications for their pilot projects research training program. Grants ranging from $5,000 to a maximum of $20,000 are available to occupational health and safety (OHS) researchers at educational institutions in Minnesota, North Dakota, South Dakota, and Wisconsin.
