Have students break into daily themes to participate in National Farm Safety and Health Week.

Take a field trip! Change the classroom scenery by traveling to a farm, business, manufacturing or processing facility!

Offer a research project about agriculture health and safety. Have students practice with handwashing and Personal Protective Equipment best-practices.

Partner with another teacher! Partner with a science/biology teacher for a unit in zoonotic diseases. Share farm safety pictures!

Encourage students to take pictures on their farm, at work, or at school demonstrating a farm safety lesson from the curriculum.

Connect & Reflect! Use technology to give students creativity and a space to share. Tell stories to generate discussions, then re-group and discuss. Show a video!

How the video will change their own activities. Timing is everything! Adapt your lesson plans to the seasons.

Teaching agriculture safety and health is an important topic for the next generation of farmers and related agriculture professions.

UMASH is funded by the National Institute for Occupational Safety and Health cooperative agreement U54OH010170 (2009-2021)

Ways to Promote Agricultural Health and Safety in the Classroom

1. Highlight an awareness event in your classroom!
2. Bring a guest speaker!
3. Take a field trip!
4. Offer a research project about agricultural health and safety!
5. Partner with another teacher!
6. Share farm safety pictures!
7. Generate discussion!
8. Show a video!
9. Adapt lessons to the seasons!
10. Make it fun with tech!

Our goal is to encourage the conversation of agricultural health and safety to take place in the classroom.
